

About GEOV313 – fall semester 2017

The course will focus on relevant research papers in paleo- and mineral magnetism, as well as more basic material on palaeomagnetic- and rock magnetic methods and statistics. The exact literature list can to some extent be tailored to the needs of any students interested in the course.

Regular lectures in GEOV313 are not planned for the fall semester of 2017. If you have a strong need for the course, please contact Harald Walderhaug on Email Harald.Walderhaug@uib.no to discuss possibilities.
